**(54) PRODUCTION OF  
CAPSULE SUBSTANCE  
ENCLOSING TASTY  
INGREDIENT**

(57) Abstract:

**PURPOSE:** To eliminate leaking or scattering of a liquid in opening a pack, etc., and continuously obtain the subject capsule substance excellent in salt resistance at a low cost by using an alkaline metal alginate at a low ratio of mannuronic acid to guluronic acid.

**CONSTITUTION:** Both of (A) a liquid substance containing a water-soluble bivalent metal salt and a tasting ingredient as a core liquid and (B) an aqueous solution of an alkaline metal alginate at <1.0 ratio (M/G) of (B) mannuronic acid (M) to guluronic acid (G) as a coating liquid are subjected to interfacial reaction and gelatinized to afford the objective capsule substance containing the ingredient (A) as the

core substance coated with a gel of the ingredient (B).

### Abstract:

JP 2035066 A

Prod. of capsule enclosing flavouring component comprises (1) gelling (I) liquid material contg. the flavouring component, and (II) aqueous soln. of alkali metal alginate of up to 1.0 in ratio of mannuronic acid:glucuronic acid as coating soln. by interface reaction and (2) enclosing core body composed of flavour component with gel of bivalent metal alginate. (I) comprises water-soluble bivalent metallic salt, e.g. calcium chloride, lactate or gluconate, flavouring component and opt. gelatinous material or edible oil.

USE/ADVANTAGE - Edible capsule of seasoning such as soya bean sauce or ketchup, spice such as mustard or garlic or edible oil-contained emulsion such as salad dressing, or topping material or medicine is obtd. It tastes salty.
